2.1.4 2014-10-21

Fix <i>theme.css</i>	Fix shuttle button icons when in RTL mode. General update to table cell alignment when in RTL mode.
--------------------------------	--

2.1.3 2014-09-23

Fix <i>theme.css, theme.js</i>	Improvements to IR functionality when in RTL mode: <ul style="list-style-type: none"> - Pagination button images swapped. - Control Panel position. - Control break header alignment. - Actions Menu: Rows per Page and Format menu items alignment. - Actions Menu: Rows per Page and Format menus flyout direction. - Column header menu icons alignment. - Column header menu position. - Search bar element ordering.
--	---

2.1.2 2014-09-09

Fix <i>theme.css</i>	APEX .hideMeButHearMe style added for RTL mode to prevent unwanted horizontal scroll bar.
--------------------------------	---

2.1.1 2012-11-28

Important Note

This is the last version of Echo theme to support APEX versions 4.0 and 4.1. All future updates to Echo theme will be developed for and tested with APEX 4.2+ only. This is so development efforts can be focussed on the most recent versions of APEX and Echo theme can take advantage of the latest APEX features.

Update <i>theme.js</i> <i>theme.css</i>	Report header classes are now applied to the th.echo-report-header element instead of the inner wrapper. This is to accommodate report headers with individual items of varying heights, which previously did not look good. Corresponding changes to report styling have been made to facilitate this setup.
Update <i>theme.js</i>	The pageload overlay did fadeout but is now removed entirely. Fixes a bug in Chrome where fadeOut() didn't work and so the overlay made the page unusable.
Update <i>theme.css</i>	New style to right align IR toolbar when DIR is set to "RTL".

2.1 2012-03-01

Update <i>ECHO_THEME.sql</i> <i>theme.js</i>	Updated page template to add new container for GLOBAL NOTIFICATION. Previously global notifications would just output verbatim, with no style, but are now wrapped with a message region for better theming.
Update <i>ECHO_THEME.sql</i> <i>theme.css</i> <i>theme.js</i>	Updated page templates to facilitate fixed and percentage width CSS-P layouts. Changes include: <ul style="list-style-type: none">• New "echo-page" wrapper div.• Moved layout region 1 inside header-inner.• New "echo-page-body" wrapper divs.• Moved footer break point.
Update <i>ECHO_THEME.sql</i>	Added tabindex attribute to <a> element of ... Label with Help templates to prevent most common cause of "double tab" to move to next form input.
New <i>ECHO_DEMO.sql</i>	Added new controls to page 0 to demo page width. Trivial layout changes on other pages.
Fix <i>ECHO_THEME_4.1.sql</i>	Navigation Bar sub template of Two Level Tabs with 2 Sidebars page template had rogue ID attribute causing styling errors. Removed incorrect ID.
Fix <i>theme.css</i>	Added better fix for visible jQuery UI datepicker container caused by bug in jQuery UI 1.8.14 (APEX 4.1).
Fix <i>theme.css</i>	Added "left" property for APEX .hideMeButHearMe style that doesn't always hide these elements on long pages due to too small "top" value.
Update <i>Documentation</i>	Added notes on setting the background colour and overriding the default page layout settings.

2.0.1 2012-01-27

Fix <i>ECHO_DEMO.sql</i>	Added null value for: Background color for checked row Background color for current row
------------------------------------	---

	in all report templates. These values are required (but not required to be valid hex values) in APEX 4.1 otherwise tabular form row selection functionality is broken.
Update <i>ECHO_DEMO.sql</i>	Added new page to demo tabular forms.
Update theme.css	Minor tweaks to report styles to accommodate tabular forms.
Update theme.js	Disabled report row highlighting to accommodate tabular form row selection highlighting (can't have hover style and persistent highlighting using the same class). Updated formatReports function to add click event for tabular form checkboxes to highlight rows using a class (bypassing APEX's implementation).

2.0 2012-01-10

Fix theme.css	Fixed horizontal links list css to hide list separator element.
Fix theme.css	Added fix for visible jQuery UI datepicker container caused by bug in jQuery UI 1.8.14 (APEX 4.1).
Fix theme.css	Fixed crazy bug in IE9 where region with horizontal scrollbar (overflowing content) would infinitely expand bottom margin on mouseover/out.
Fix <i>ECHO_THEME.sql</i>	Added row class to One Column Unordered List Report
New <i>ECHO_THEME.sql</i>	Added new classes to page templates to identify success and notification messages.
Update <i>ECHO_THEME.sql</i>	Updated all page templates to use HTML5 doctype.
Update <i>jquery.layout.js</i>	Updated from v1.2.0 to v1.3.0 rc29.15 (most noticeable difference being span.ui-layout-resizer are now div.ui-layout-resizer).
Update <i>ECHO_THEME.sql</i> theme.js	Added ID attribute to page template messages and moved javascript for message close button from onclick event to jQuery delegate.
Update <i>ECHO_THEME.sql</i>	Removed APEX Themes attribution link from footer.
Update <i>ECHO_THEME.sql</i>	Added new Report Filter – Multi Row region (new template class).
Update <i>ECHO_THEME_4.0.sql</i>	Updated Error Page template to use translated string for button #RETURN_TO_APPLICATION#.
Update <i>ECHO_THEME_4.1.sql</i>	Updated Error Page template to use new substitution strings #ADDITIONAL_INFO#, #TECHNICAL_INFO# and #RETURN_TO_APPLICATION#.
Update <i>ECHO_THEME_4.1.sql</i>	Added #BUTTON_ID# to all button templates to support dynamic actions on buttons.
Update	Minor tweak to button icon padding for nicer

<i>theme.css</i>	positioning. Reduced region margins to minimise wasted space between regions. Unfloated #BOX_BODY# regions for nicer layout. Updated ui-layout-resizer selectors from span to div to coincide with jQuery UI.Layout update.
Update <i>theme.css</i> <i>theme.js</i>	Tweaked report styling for nicer report headers and tables.
Update <i>ECHO_DEMO.sql</i>	Rearranged List templates into Lists and Navigation pages for clarity. Moved Datepickers to Forms page and removed Datepickers page. Updated background colour CSS example on Page 0 because of update to jQuery UI.Layout.

1.3.1 2011-10-31

Fix <i>theme.js</i>	Fixed bug with labelHelp function introduced in 1.3 that prevented help content from loading into popup if content was plain text. Function now loads plain text or full HTML content.
-------------------------------	--

1.3 2011-10-17

Important Note

Due to changes in APEX 4.1 it is no longer possible to maintain a single set of templates or a single demo application for APEX 4.x, therefore the theme export file ECHO_THEME.sql and the theme demo file ECHO_DEMO.sql have both been split into two separate files ECHO_THEME_4.0.sql and ECHO_DEMO_4.0.sql for APEX 4.0+ and ECHO_THEME_4.1.sql and ECHO_DEMO_4.1.sql for APEX 4.1+. Documentation will continue to refer to ECHO_THEME.sql and ECHO_DEMO.sql, but the appropriate files must be used depending on the version of APEX you are running.

Update <i>theme.js</i>	Updated labelHelp function so item label is now shown as popup title (instead of "Help") and the same dialog is re-used, allowing the dialog position to persist on subsequent calls.
Update <i>theme.css</i>	Removed redundant css and moved/grouped selectors related to background colour for easier editing.
Update <i>ECHO_THEME.sql</i>	Updated Hideshow Region templates to include new classes for hideshow state (can be used for additional styling).
Fix <i>theme.js</i>	Corrected the additional classes added to the APEX RDS region for better consistency with other region templates (the UI theme font was not being applied to RDS because of incorrect classes).
Update <i>ECHO_THEME.sql</i>	Renamed Report Filter - Single Row region template class from echo-report-filter-single-row to echo-region-report-filter for consistency with other region templates.
Update <i>theme.js</i>	Removed redundant code.
Update <i>theme.js</i>	Changed HOVER STATE code to support "hot" buttons in APEX 4.1.

Update <i>Folder structure</i>	Moved "skins" folder to be sub folder of /src and /min, so can be minified and loaded using THEME_PATH as a shortcut.
New <i>ECHO_DEMO.sql</i> <i>Images</i>	Added region on Page 0 to demonstrate overriding the theme background colour with any hex value. The pane resizer bar images have been updated to now handle any background colour. Now you can set a background colour that perfectly matches the skin!
New <i>ECHO_THEME_4.1.sql</i>	Added Hot Buttons region to Page 10.
New <i>ECHO_DEMO.sql</i> <i>ECHO_THEME.sql</i> <i>theme.js</i> <i>theme.css</i>	Added custom error page template to better handle error page content. Error Page template is now set to "Error Page" in theme settings and will automatically be used in place of "No Tabs". NB. Page 0 content is NOT output on error page, therefore theme overrides (CSS, JS) do not apply to the "No Tabs" page template when used as an error page, which can cause discrepancies, depending on the settings used. A custom error page template is a more universally suitable solution.

1.2 2011-09-16

Important Note

Due to changes in APEX 4.1 it is no longer possible to maintain a single set of templates for APEX 4.x, therefore the theme export file ECHO_THEME.sql has been split into two separate theme export files ECHO_THEME_4.0.sql for APEX 4.0+ and ECHO_THEME_4.1.sql for APEX 4.1+. Documentation will continue to refer to ECHO_THEME.sql, but the appropriate theme export file must be imported into each application depending on the version of APEX in which the application is running.

Fix <i>ECHO_THEME_4.1.sql</i>	Nested list templates have been modified due to changes in template output introduced in APEX 4.1.
Update <i>ECHO_DEMO.sql</i>	Updated to include template sets for both APEX 4.0+ and APEX 4.1+.
Update <i>Documentation</i>	Added notice of update to theme export files.

1.1.0 2011 08 25

Fix <i>theme.css</i>	Added selector for #apex-dev-toolbar (with #htmlDbDevToolbar) which changed in APEX 4.1. Without z-index toolbar is hidden below panels.
Update <i>ECHO_DEMO.sql</i>	Tweaked sidebar forms on Page 0 to remove labels and free up horizontal space.
Update <i>theme.css</i>	Changed echo-label-no from visibility:hidden to display:none;

1.0.9 2011-08-24

Update <i>ECHO_THEME.sql</i>	Updated all page templates to move Region Position 8 inside APEX FORM to allow Region 8 content to contain admissible form items.
New <i>ECHO_DEMO.sql</i>	Added APEX version number to System Information on Page 0.
Update	Tweaked IE version output format in System

<i>ECHO_DEMO.sql</i>	Information on Page 0.
----------------------	------------------------

1.0.8 2011-07-19

Fix <i>theme.js</i>	Modified hide/show region button selector to prevent click event incorrectly being applied to other region buttons.
-------------------------------	---

1.0.7 2011-06-09

Update <i>Documentation</i>	Choosing a Skin, jQuery UI.Layout
Update <i>ECHO_DEMO.sql</i>	Added example Javascript region to Page 0 to demonstrate jQuery UI.Layout settings.
Update <i>theme.js</i>	Moved layout.init() config object to layout.common to facilitate layout option setting/modification from within APEX pages.

1.0.6 2011-06-09

New <i>Folder structure</i>	/skins folder with an example custom skin framework/tutorial.
---------------------------------------	---

1.0.5 2011-05-17

Fix <i>ECHO_THEME.sql</i>	Removed duplicate ID from all report templates (change in output from APEX 3->4).
Fix <i>ECHO_THEME.sql</i>	Wrapped item separator with in Horizontal Links List to fix validation error.
Fix <i>ECHO_DEMO.sql</i>	Renamed column aliases on Reports (70) page to make unique and avoid duplicate ID validation errors.
Fix <i>ECHO_THEME.sql</i>	Removed column header ID references from Value Attribute Pair Report template to avoid inevitable ID duplication.
Update <i>Folder structure</i>	
Update <i>Documentation</i>	

1.0.4 2011-05-16

Update <i>theme.css</i>	Removed redundant code on dev toolbar that resulted in incorrect edit link button behaviour.
Fix <i>theme.js</i> <i>theme.css</i>	Undo change to autocomplete added in 1.0.2. Causes more problems than it resolves. Custom APEX jQuery UI autocomplete plugin doesn't provide any useful events to bind to to manipulate autocomplete elements. Note: plugin is not the same as autocomplete now rolled into jQuery UI library!
Fix <i>theme.css</i>	Added properties to INTERACTIVE REPORTS section to prevent skins with light coloured fonts from affecting the text colour of IRs.
Update	Added explanations of known issues (autocomplete,

<i>ECHO_DEMO.sql</i>	IRs to Forms (30) and Interactive Reports (80) pages.
Update <i>Documentation</i>	

1.0.3 2011-05-12

Update <i>Documentation</i>	
Update <i>ECHO_DEMO.sql</i>	Changed pre-configured THEME_PATH to match documentation.

1.0.2 2011-05-10

Fix <i>theme.js</i> <i>theme.css</i>	Override APEX positioning of autocomplete item popup menu to enable correct positioning when item is contained within a scrollable element that is not <body>.
---	--

1.0.1 2011-04-27

Fix <i>theme.js</i>	Reinstated code to override APEX IR column header menu positions due to original position calculations presuming no positioned ancestor elements.
Update <i>ECHO_DEMO.sql</i>	Removed reference to panel resizing on APEX Page 49 because of poor support for jQuery UI Draggable in APEX supplied version of jQuery UI (1.8). Newer versions of jQuery UI should fix text selection bugs and no support in IE9.

1.0 2011-04-26

First release.
